

Special Issue

Architecture, Cities, and Sustainable Development Goals

Message from the Guest Editors

Sustainable architecture endeavours to construct buildings that harmoniously coexist with their physical surroundings and social contexts, leveraging renewable sources, and prioritizing eco-friendly materials to minimize the environmental impact throughout their life cycle. On a larger scale, sustainable cities are planned to prioritize the well-being of their inhabitants by promoting walkability, healthy lifestyles, efficient public transportation, socio-spatial justice, and equitable access to services. The 17 Sustainable Development Goals (SDGs) instigated a novel agenda for sustainable development, through which research in architecture and urbanism plays a pivotal role. We welcome submissions on a wide range of topics on architecture and cities as they relate to the Sustainable Development Goals (SDGs), including, but not limited to, the following subjects:

- **User-Centred Design and Co-Creation;**
- **Urban Design and Spatial Development for Resilience;**
- **Social Equity and Inclusivity;**
- **Sustainability and Environmental Stewardship;**
- **Circular Urban Planning;**
- **Psychological Resilience and Sustainable Cities.**

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
