

Special Issue

Green Sustainable Process for Chemical and Environmental Engineering and Science

Message from the Guest Editors

A sustainable green process that will allow us to reduce the human impact on the environment is urgently needed in modern society. Sadly, numerous questions must be answered first, before this can be achieved: What is the real impact of change in processes? Can we compare the impact using different green processes? What are the methods that must be used? Are the metrics and goals comparable? This Special Issue focuses on original research articles and reviews regarding the analysis of sustainable green processes in different fields of research. The issue also aims to highlight the analysis of sustainable green processes, specifically: (a) Analysis of green processes in the food and chemical industry, (b) Development or application of a methodology of analysis to evaluate the impact of sustainable green processes; (c) Use or development of metrics to measure the impact of these processes. In this framework, studies concerning the analysis and application of methods to evaluate green processes' impact are welcome. We also welcome other related arguments, in the form of both specialized and interdisciplinary manuscripts.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
