

Special Issue

Improving Community Well-Being through Sustainable Interventions

Message from the Guest Editors

The ever-intensifying challenge of climate change calls on society to untangle the existing structures of provision and put in place new, more sustainable infrastructures and forms of social organisation. Community-level responses are vital in contributing to the transition to a more sustainable, low-carbon future. This Special Issue invites papers that can contribute new insights and a fresh understanding of the opportunities and challenges of improving community well-being through the application of imaginative sustainable interventions. These range from community renewable energy initiatives to infrastructural- and information-oriented change programmes that are united in their efforts to engage people individually and collectively in less wasteful and more pro-environmental patterns of thinking and living. Community participation in fighting climate change is crucial, and it is intended that the papers in this Special Issue will help in assessing the potential opportunities for sustainability and practicable climate action at the community level, as well as some of its limitations.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
