

Special Issue

Sustainable Environmental Analysis of Soil and Water

Message from the Guest Editors

The increase in human activities in the world is a serious threat to maintaining the health and stability of various components of the environment, including soil and water. Soil and water are two crucial materials for the continuation of life on Earth, so it is necessary to focus effort and attention on preserving these valuable resources. The goal of this Special Issue is to identify ways to better manage and use natural resources (soil and water). To this end, our objective is to determine how we can gather various information to generate precise and accurate data of soil and water without damaging them, in order to achieve sustainability. This Special Issue invites research and review articles, including new and creative ideas in the fields of:

- Smart soil and water data management.
- Conservation of soil and water resources.
- Sustainability of agricultural and urban soils.
- Digital soil mapping.
- Remote sensing in soil and water studies.
- Spatial and temporal changes of soil and water properties.
- Soil and water erosion.
- Soil moisture retrieval.
- Modeling and management of soil and water pollution.
- Land use/cover mapping.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
