

## Special Issue

# Sustainability in Innovation and Supply Chain Development

### Message from the Guest Editors

New ideas and advancements in technologies, especially digital technologies, have led to significant innovation and supply chain development in industries. Digital technologies drive innovation and advance supply chain management. These transformative changes have given rise to previously unexplored subjects for research and practical implementation as regards sustainability. The integration of sustainability principles into innovation and supply chain development enables businesses to create long-term value while minimizing their impact on the environment and society.

This Special Issue aims to highlight multi-disciplinary approaches to explore new research areas including opportunities, implementation measures and challenges for sustainability in the innovation and supply chain development processes. The scopes and levels at which research is conducted can be broad, ranging from economic, social, and environmental fields in the entire supply chain and/or narrow to one specific process, such as sourcing, manufacturing, delivery, and return, in different industries.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
