

Special Issue

Electrochemistry towards a Sustainable Environment

Message from the Guest Editors

Electrochemistry has attracted significant attention owing to its applications in various fields. Advancements in electrochemical techniques are vital in transforming and detoxifying environmental pollutants which harm the ecosystem and act as a hindrance in attaining a future sustainable society. Hence, detection of environmental pollutants, wastewater treatment, sustainable energy storage, and desalination based on ecofriendly electrochemical technologies are a boon to the environment and of great interest for researchers across the globe. This Special Issue is an ideal platform for all researchers working in the field of electrochemistry and environmental science to publish their new findings, analyses, and reviews on the subject. Researchers can address, discuss, analyze, and disseminate innovative ideas, challenges, advancements, and future perspectives of electrochemical techniques towards achieving a sustainable environment. Studies that report modeling of electrochemical systems and estimation or prediction of electrochemical signals are also welcome in this Special Issue as long as they are within the scope of *Sustainability*.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
