

Special Issue

Multiple Criteria Decision-Making Techniques in Sustainable Supply Chains and Logistics Management

Message from the Guest Editors

At present, the competition among enterprises has risen to the competition among supply chains. Meanwhile, rising carbon emissions have caused frequent extreme climate. Many carbon emissions come from production and logistics. As a result, many countries advocate the development of sustainable supply chains and sustainable logistics. To achieve this purpose, two critical questions should be unlocked: preference structure and weights. In this regard, theories, such as linear programming, Data Envelopment Analysis (DEA), the Analytic Hierarchy Process (AHP), grey theory and uncertainty theory can provide real-time solutions to uncertainty problems. In this Special Issue, original research articles and reviews are welcome. Research areas may include (but not limited to) the following:

- Sustainable supply chain and logistics system construction in post epidemic era;
- Sustainable packaging;
- Sustainable transportation and distribution;
- Garbage recycling and disposal;
- Supply chain operations for a circular economy
- Sustainability and Lean Production
- Sustainable supply chain design, optimization and data-driven modelling;
- Sustainable food supply chain innovation.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
