

## Special Issue

# Groundwater Systems and Pollution

### Message from the Guest Editors

Groundwater plays a critical role globally in human consumption, habitat maintenance, and human society development, as well as in the sustenance of streams, lakes, wetlands, and aquatic communities. Over the years, the triple effects of global climate change, anthropogenic activities, and poor groundwater management have resulted in the growing importance of groundwater, which has moved groundwater research to the forefront of the geosciences. It is a priority to understand groundwater systems, which comprise the subsurface water, the geologic media containing the water, flow boundaries, as well as recharge and discharges, to better evaluate groundwater. In the changing environment of past decades (e.g., global climatic changes, changes in land use patterns, growing population, increasing pressure on existing water supplies and varieties of anthropogenic activities), groundwater pollution has been developing at an alarming frequency and posing a major health risk for many people worldwide. Therefore, there is a need to advance knowledge for understanding the groundwater system and pollution to achieve the sustainability of groundwater resources.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
