

Special Issue

Infrastructure, Transport and Logistics for Sustainability in Tourism

Message from the Guest Editors

The sustainable development of tourism is closely related to the level of development of industries integrated with it, including transport and logistics. In general, transport and logistics as an object of research are studied quite well. Nevertheless, it is very important to study the role and importance of transport and logistics for the sustainability of tourism, especially in regions with transition and developing economies. Economically oriented approaches to the development of the transport and logistics system dominate regional tourism development programs, but natural factors and the opinions and traditions of local communities should also be taken into account. The development of transport infrastructure is essential for the development of the tourism sector as it increases accessibility, expands geographical coverage, increases competitiveness, improves the quality of services, promotes sustainable development and stimulates investment. This Special Issue invites representatives from various fields of science: economists, geographers, ecologists, sociologists, logistics specialists, researchers of the transport network and broadly understood infrastructure, etc.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
