Special Issue

The Development of Energy Systems: Sustainability, Intelligence and Optimization

Message from the Guest Editors

The fight against global warming accelerates the level of renewable and carbon-free energy production, which promotes the use of renewable solutions in the energy mix. The intermittent nature of renewable energies requires the ability to manage the optimization between production and demand in real-time. Electricity storage can help solve the problem of intermittency. However, the need for energy storage requires the rethinking of electrical networks. Solutions will vary, depending on whether it is possible to compensate for intermittency by finding electricity without distance constraints, or to envisage a decentralized system in which energy must be produced locally and with less impact on the environment. Energy storage technology provides a solution for this. Compared to large electrical grids, small-scale decentralized installations with diverse storage technologies contribute to the development of energy systems. This Special Issue focuses on the broad topic of energy system development. It will include articles that target sustainable solutions incorporating, in whole or in part, storage technologies or renewable sources for decarbonized energy production.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
