

## Special Issue

# Monitoring and Control of Air Pollution for Sustainability

### Message from the Guest Editors

Air quality monitoring in urban environments is of great importance for environmental and health care. The information registered by air monitoring networks is a key input for environmental institutions and local governments, which need to know the air conditions and generate policies and action plans to control environmental threats, evaluating the impact of these measures. Traditionally, air quality information in urban areas is obtained through networks of certified high-end measuring stations, which provide highly reliable data. However, the deployment of certified stations is difficult or unfeasible for many cities, due to their high acquisition and maintenance costs. The present Special Issue aims to develop an intelligent and remote calibration system for low-cost air quality sensors that minimizes the calibration time, can be used in various urban environments and climatic seasons, and maximizes the quality of the data delivered. We encourage researchers to submit experiences related to the design and implementation of air quality monitoring systems for urban sustainable environments.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
