Special Issue

Sustainable Approaches to Biodeterioration/Biodegradation and Biotreatment in Cultural Heritage Environments

Message from the Guest Editor

Biodeterioration occurs when living organisms chemically or physically alter the appearance of material objects. Organisms can colonise and destroy valuable cultural heritage. Many organisms including bacteria, moulds, higher fungi, viruses, mosses, lichens, and plants inhabiting cultural heritage can cause biodeterioration/biodegradation, but on the other hand produce interesting bioactive substances that we can use in conservation processes. Particular attention is paid to organisms/biocompounds that play a positive role in bioprotection, bioprecipitation, bioconsolidation, biocleaning, and biological control. Moreover, new advances in biotechnology and applied microbiology are providing important insights into cultural heritage conservation. The scientific results presented in this Special Issue "Sustainable Approaches to Biodeterioration/Biodegradation and Biotreatment in Cultural Heritage Environments" can contribute to a broader understanding of new perspectives for the future generation of biocontrol/preservation agents and methods with sustainability potential.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
