

Special Issue

Novel Decision Technology Analytics for Evaluating Sustainable Strategies and Environmental Operations

Message from the Guest Editor

This Special Issue is seeking applied analytics papers that describe either the creation of new methods or provide innovative applications of existing computational methods for assisting with the analysis of sustainability strategies and environmental operations. In practice, environmental analytics is an integration of science, visualization methods, and computational analytics and techniques that combines computers, computational intelligence, information technology, mathematical modeling, and system science into the assessment of “real-world” sustainability and environmental problems. Contributions to this Special Issue should investigate novel computational approaches – be this on the side of modeling, computational solution procedures, optimization, simulation, or various analytical technologies – as applied to sustainability analysis or environmental decision-making. In line with the aims and scope of this Special Issue, manuscripts should emphasize the practical relevance or the methodological contributions of the work to the analysis of sustainability strategies and environmental operations.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
