

Special Issue

Sustainable Solid Waste Treatment, Disposal, and Recycling Potential

Message from the Guest Editors

The amount of waste generated up until this point has been increasing, but so has the concern to find solutions to it. The starting point is the increasingly demanding regulations on waste management, which has led to attempts by researchers and public administrations to find different solutions to the problem, not only in terms of minimizing waste generation, but also in terms of its treatment, recycling, and subsequent reuse. These ideas can be transformed into new opportunities and the opening of new market niches that can be used for the benefit of the entire society. Entrepreneurs, designers, distributors, manufacturers, and users can be participants in the solution to the problem of waste management. This Special Issue aims to delve into the problem and present new proposals that are being studied. We look forward to receiving your contributions. **Keywords:** waste treatment; recycling possibilities; waste management; new market niche; benefits to society

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
