

# Special Issue

## Full Metal Circularity by 2050

### Message from the Guest Editors

This Special Issue seeks to explore the potential of a circular economy in promoting long-term sustainable development in the metal sector through a critical discussion. Our goal is to collect a series of academic articles that explore deeper into the transformative possibilities of circular solutions in the metal industries and related sectors, covering the entire supply chain. We welcome articles that explore a comprehensive approach, considering the macro, meso, and micro levels of analysis: Macro-Level Efforts: National policy frameworks and regulation. Global policy alignment, international agreements, and regulatory frameworks that promote circular practices and penalise unsustainable behaviours.

Meso-Level Efforts: Industry collaboration, innovation in production processes, and development of reusing technologies that enhance resource efficiency and reduce waste.

Micro-Level Efforts: Individual company initiatives, changes in consumer behaviour, circular business models and design, and the widespread use of sustainable and circular practices.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
