Research on the Advances of Geological Structure Survey Theory and Detection Technology

Message from the Guest Editors

The engineering construction problems under complex geological conditions have long puzzled the geological and engineering circles. It is an important basis to ensure the smooth progress of engineering construction to find out the unfavorable geological conditions such as fractures, joints, faults and cavities in the area and construction site in detail. The development of karst has an important impact on the enrichment and migration of oil and gas resources, the distribution and runoff of groundwater resources, the development and distribution of karst related mineral resources, and engineering construction. The geological disasters caused by karst are becoming more and more frequent, and the losses are incalculable. It is particularly important to carry out the survey technology research on the underground rock mass structure and deep void area, master the refined structural characteristics of the rock mass defect area and underground space shape, and decipher the "black box" structure of the underground rock mass.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
