# Sustainable Seismic Design Approaches, Structural Systems, and Retrofit Measures of Civil Engineering Structures

### Message from the Guest Editors

The risk of earthquakes represents a challenge for sustainable regional development in different parts of the world. The high losses from recent earthquakes confirm the pressing need for effective strategies to manage seismic risk to achieve sustainable development goals not only for existing and new structures but also for building inventories and transportation networks at the urban scale. The level of understanding concerning how different components of the built environment respond to seismic hazard events and the availability of effective and economical retrofit approaches to control the physical damage and minimize the disruption of service expected by earthquakes have a profound role in mitigating seismic losses. This Sustainability Special Issue aims to gather contributions related to contemporary seismic design methodologies, structural systems, and retrofit approaches that can support sustainable development goals. This includes, for instance, alternative design and retrofit approaches that can improve sustainability by limiting non-structural and structural damage and residual deformations after earthquakes.

## **About the Journal**

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

### Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

#### **Author Benefits**

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### **High Visibility:**

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
