

Special Issue

Exploring the Effect of Multi-Method Approaches in Socio-Ecological Systems

Message from the Guest Editors

Combining multi-method approaches has been widely acknowledged as a way to improve the sustainability of socio-ecological systems. This Special Issue aims to advance the state of the art in the integration of different types of knowledge, such as ecological, economic and social and tacit, as well as combining quantitative with qualitative approaches to support healthy socio-ecological system management. More sustainable models are needed, in the form of transdisciplinary approaches, to develop landscape transformation solutions that acknowledge the economic, ecological and social importance of ecosystems. This means integrating socio-economic viability, as well as the multifunctionality of different ecosystems, in a way that stakeholders' perceptions and values are considered. The complexity associated with socio-ecological systems, which has been increasing due to the impacts of climate change and the lack of ecological-based landscape planning (e.g., wild fires, droughts, and floods), calls for new collaborative approaches to support informed decision making to protect and regenerate the natural environment.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
