Special Issue

Biodiversity Conservation and Sustainable Vegetation Management: Forestry, Agriculture and Protected Areas

Message from the Guest Editor

Maintaining our planet's biodiversity in relation to its terrestrial ecosystems is closely related to all activities that affect and influence the vegetation of these natural or human-influenced ecologies. All nature conservation efforts can only be effective within the framework of a sustainable global society. This Special Issue, entitled "Biodiversity Preservation and Sustainable Vegetation Management: Forestry, Agriculture and Protected Areas", aims to provide a broad overview of the frontlines of this field of pure and applied ecological research. This Special Issue is looking for original research, case studies, preliminary reports, and scientific review articles linked to biodiversity conservation in connection with activities that affect vegetation, such as forestry, agriculture, grazing, urban park maintenance, landscape architecture, nature conservation management, national park establishment, land use planning, seaweed and reed farming, among many others. I look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
