Evaluation of Landscape Ecology and Urban Ecosystems

Message from the Guest Editors

Landscapes are weighted against different criteria, traditionally we mean economic value, but recently the definition of the value of landscapes has expanded to include both the tangible and intangible. In an ecological context, value is interpreted as the value of the preservation of biodiversity and ecosystem functions. Landscape ecology provides important frameworks for understanding and conserving biodiversity within cities and has played an important role in the development of a substantial and expanding body of knowledge about urban landscapes and communities. The quantification of urban ecosystem components is necessary to assess the culturally and landscape ecologically important impacts of development and land use policy and strategic planning. The aim of this SI is to demonstrate that urban areas can host many landscape functions despite their predominantly built-up character, such as urban open spaces and urban forestry and woodlands. Research areas may include, but need not be limited to, the following:

Resilient cities;

Integrated landscape management;

Urban green spaces and forestry. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
