

Special Issue

Social Psychology, Economic Choices, and Sustainable Lifestyle

Message from the Guest Editor

Knowledge of how to explore transitions towards sustainable lifestyles is not possible without the vision of social psychology. Sustainable lifestyles have been studied as sets of behaviors that can be studied in a space-time context (García-Mira et al., 2017).

Undoubtedly, this analysis cannot ignore the economic perspective of the transition towards other economic models that support such behaviors, exploring obstacles and enablers of more responsible economic behavior. This Special Issue will attempt to bring together a set of interdisciplinary approaches which integrate the approach of social psychology and other related disciplines, and aims to delve into the economic choices that link and explain our behavior with the environment, in terms of clarifying the keys to the interaction and weight of the various components of such models. Papers that include theoretical conceptualizations from the field of social psychology are welcome which are likely to serve as an axis of discussion and provide an adequate framework of analysis that supports the evaluation of socioeconomic and environmental impacts.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
