

## Special Issue

# Innovation for Sustainability Development

### Message from the Guest Editors

Within the framework of the issue of sustainable development, innovation is oriented towards the ecological type of innovation, the aim of which is to achieve significant and tangible progress in the framework of sustainable development by reducing the impact on the environment or by more efficient and responsible management of natural resources, including energy. Innovations present opportunities for sustainable development. They facilitate the transition - the transfer of innovative technologies into practice to reduce the consumption of resources and the impact on the environment, so they bring a competitive advantage to many companies and sectors. Innovative approaches are significant to move toward more sustainable systems. Innovative practices and knowledge help society toward sustainability and the creation of informed and responsible consumers. This Special Issue welcomes studies that consider the environmental, social, and economic aspects of innovation supporting sustainable development. We look forward to receiving your contributions.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
