

Special Issue

Spatial Planning and the Latest Challenges of Sustainable Urbanization

Message from the Guest Editors

Whether we look at the environment, society or the economy, it is now clear that all these areas are closely linked, interconnected and interdependent and that building a sustainable future depends on our ability to best balance resources (social, economic, and environmental) in order to build a development model that puts people at the center while respecting the environment in which they live and which they will leave to their descendants. In this context, cities play a key role since they are both the subject and the object of current development processes. As the subject, they are the drivers of local and national economies and thus major players in changing development processes into a system of interdependencies between the economy, society and the environment. As objects, cities are the places where populations and economic activities are, and will increasingly be, concentrated, and on which development policies are focused. With this perspective in mind, this Special Issue encourages the scientific community to explore and reflect on the outcomes and opportunities of this multifaceted scenario.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
