

Special Issue

The Road to Sustainable Resources and Environmental Economics—2nd Volume

Message from the Guest Editor

The need to secure sustainable resources and instill environmental economics is becoming increasingly important as part of efforts to achieve peak carbon. In this context, this Special Issue directs its focus at these two concepts, sustainable resources and environmental economics, seeking to bolster commitments to the dual conditions of environmental and resource development and carbon emission constraints.

The closely related topics of sustainable resources and environmental economics include important subtopics such as energy economics, environmental policy and management, climate change economics, and others. This call invites the submission and discussion of the latest methods to tackle these challenges through analyses that center on global, regional, and urban studies. Moreover, we welcome papers providing different levels of analyses and assessing the complex interactions of resource and environmental economics and their impacts on people, societies, and infrastructure.

We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
