# Sustainable Approaches to Improving Road Traffic Safety and Environmental Capacity

### Message from the Guest Editors

Currently, it is necessary to deal with Road Traffic Safety in close cooperation with the environmental capacity of roads. The whole process must be seen in the holistic synergy of sustainable preparation, construction, and operation of individual elements of the transport process. From the perspective of Road Traffic Safety, the limiting factors are above all skid resistance of wearing course, pavement roughness, the presence of water on the road, and the driver's ability to make the right decision. From a geometric point of view, it is important to objectify morphology of the payement surface, which is divided into four levels (micro-, macro-, mega-texture, and unevenness). However, it should be kept in mind that increasing safety, for example through road retarders, can lead to a deterioration of the environment of residents around city roads, thereby reducing the Pavement Environmental Capacity. Pavement Environmental Capacity represents such a state of roadway operability, assessed through friction, transverse and longitudinal unevenness, surface condition, in which the established environmental quality indicators are not exceeded.

### **About the Journal**

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

### Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

#### **Author Benefits**

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### **High Visibility:**

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
