

## Special Issue

# Drought and Sustainable Water Management

### Message from the Guest Editors

Drought is a complicated problem, and it is difficult to provide a unique definition of its drivers and consequences. All types of droughts begin with a deficit in precipitation in time or space, and comprise a more complicated hydro-meteorological condition. Drought is one of the primary important challenges in the production, safety and resilience of foods and agricultural goods. Changing climate raises serious concerns about water scarcity and energy generation. In order to combat drought, sustainable water management practices are needed to achieve the Sustainable Development Goals (SDGs). This Special Issue, entitled “Drought and Sustainable Water Management”, focuses on drought analysis considering the Sustainable Development Goals. We welcome papers applying a variety of drought indices for examining the meteorological, agricultural, hydrological, socio-economical, and ecological aspects of drought.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
