

Special Issue

Real Data Experimental Scenarios Where Renewable Energies and Innovative Technology Enable Sustainability in Urban Transportation

Message from the Guest Editors

The way in which we deploy technology improvements shapes our environment. In 2020, the transport sector contributed about one-fifth of the EU's total carbon dioxide (CO₂) emissions, the leading greenhouse gas (GHG), 75% of which originates from passenger cars. Cities account for over 70% of global CO₂ emissions, most of which come from industrial and transport. The present Special Issue explores possible directions to achieve sustainability in urban transportation for the private and public sectors. It expects to disclose the newest theoretical methods, technology solutions, real-case simulations, and use-case demonstrators created by experimental analysis. This Special Issue will focus on, but will not be limited to, the following topics:

- Innovative transport systems and transport models;
- Hybrid, electric, and biofuels powertrain;
- Driving behaviour's effects on energy consumption and emission;
- Vehicle emissions and pollution simulations and measurements;
- Effects of pollution mitigation on urban life;
- Energy efficiency improvements and strategies;
- Transport policy in the urban field.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
