Green Logistics and Supply Chain Management: Innovations for Sustainable Transport and Distribution

Message from the Guest Editors

The growing global emphasis on sustainable development has brought to the forefront the need to innovate within the logistics and supply chain sectors, especially in light of increasing environmental concerns. Green logistics plays a pivotal role in reducing the environmental footprint of transportation and distribution systems, while enhancing the efficiency and sustainability of supply chain operations. As industries seek to optimize their operations amidst growing regulatory pressures and evolving consumer expectations, the importance of integrating sustainability into logistics and supply chain management has never been clearer. This Special Issue seeks to highlight recent innovations, theoretical developments, and practical applications that drive sustainable practices within transport, distribution, and the broader supply chain ecosystem. By examining logistics operations and supply chain management, this Issue aims to inform strategies that mitigate environmental impacts while ensuring supply chain efficiency and resilience.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
