Special Issue

Urban Climate: Outdoor Comfort and the Impact of the Urban Environment on the Thermal Behavior of Buildings

Message from the Guest Editors

The use of open spaces in cities can improve people's quality of life, reduce pollution and noise, and encourage social interaction and community cohesion. However, urbanization and climate change have contributed to the creation of the Urban Heat Island (UHI) and this has led to increased temperatures in these areas. This situation is forcing the administrations of large cities to take measures so that citizens can protect themselves from the heat.

In this context, this Special Issue of Sustainability provides an opportunity to discuss the relevant knowledge surrounding sustainable strategies applied in cities with a hot climate, with the ultimate aim of facilitating heat relief.

The design of these spaces requires the application of adequate design strategies, selection of suitable materials, and consideration of the hours of use to ensure the thermal comfort of occupants. In addition, said space must be designed considering energy efficiency and sustainability, using materials and technologies that minimize environmental impact and reduce energy consumption.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario Institute of Technology, Oshawa, ON L1G OC5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
