Special Issue

Air Quality-Related Sustainable Transportation Planning and Optimization in Smart Cities

Message from the Guest Editors

Air quality related diseases represent an unprecedented global health crisis and the effects may be associated with environmental and socio-economic factors. Trafficrelated atmospheric emissions of greenhouse gases and toxic air pollutants are a serious environmental problem that affects climate change and air quality in smart cities. Many current planning models and policies around the world ignore the potential impact of general exposure to anthropogenic emissions and underestimate local exposure, especially at significant locations such as traffic hotspots. Our aim is to find nonlinear relationships between long-term transport mobility data, sociodemographic parameters and cardio and respiratory diseases. This subject will provide a basis for establishing sound climate change policies in other areas, such as public health and urban planning. Potential topics include, but are not limited to, sustainable mobility, transport geography, human health and exposure, urban air pollution, universal accessibility, transport energy and climate change, and transport planning and smart cities. We look forward to receiving vour contributions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
