

## Special Issue

# Green Economy and Sustainable Infrastructure to Achieve Sustainable Development Goals

### Message from the Guest Editors

The world is inching closer to the 2030 deadline for the Sustainable Development Goals (SDGs). The challenges hampering the successful execution of SDGs are manifold, ranging from the cost of living and climate crises, and social and civil unrest, to rising carbon emissions. While a green economy and sustainable infrastructure have attained enviable positions as solutions toward the attainment of SDGs. A green economy preserves environmental resources and ecological balance together with societal progress, economic prosperity, and human civilization. It can be viewed from different lenses, including policies, innovations, and economic and social models. Sustainable infrastructure solutions are targeted at the planning, construction and operation of infrastructure projects that boost the economic and social benefits of a green economy. Sustainable infrastructure utilizes smart technologies to improve existing infrastructures, adopt green project management practices, and include circular economy models to manage construction waste. The objective of this Special Issue is to present green economy and sustainable infrastructure solutions that are relevant to the achievement of SDGs.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
