

## Special Issue

# Design of Sustainable Supply Chain and Transportation Service Mode

### Message from the Guest Editor

As the global economic growth slows, countries have developed supply chain management and logistics strategies to cope with the change in the market. However, the supply chain often fractures, and unstable problems related to logistics service quality often appear in operations. In order to ensure the sustainable development of the economy and society, building tough supply chains using artificial intelligence, big data, and Internet of things for logistics services has become the focus of modern enterprises, and both academia and industry need to carry out theoretical explorations and practice operations. Following these drivers, this Special Issue focuses on the following research perspectives: a sustainable supply chain and resilient supply chain relationship; sustainable supply chain and smart logistics service models; the impact of modern technology on transportation logistics service design; the impact of man-machine hybrid behavior on supply chain management and logistics management decisions; how a sustainable supply chain removes risk; and the innovative design of the logistics service supply chain.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

## Author Benefits

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1  
(Geography, Planning and Development)
