# Marketing and Sustainable Development: A Predictive Empirical Insight

### Message from the Guest Editors

Sustainable development is a response to ecological and moral imperatives requiring equity among the present inhabitants of Earth as well as intergenerational equity (Varey, 2010). At the micro-level, firms and consumers have witnessed the transition from a production orientation to a market orientation to, more recently, a sustainable market orientation, which integrates economic, social and ecological dimensions as a holistic approach to business.

The role of the brand is to facilitate the consumer's brand experience, creating a transformational shift towards sustainable consumption. In this vein, firms consider the importance of digital and social media platforms and initiate incremental changes towards more sustainability activities through shared values, knowledge and resources (Arnold, 2017). Transformations in the marketing function reflect changes in the immediate business environment. While the impact of transformations can be identified through companies' financial results, a deeper meaning for such a transformation exists in societal changes.

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
