

Special Issue

Sustainable Urban Mobility Network and Public Transport

Message from the Guest Editor

Understanding how mobility networks and public transport systems evolve, adapt, and distribute opportunities is essential for achieving sustainable and inclusive urban development, and recent advances in network science, mobility data analytics, and multimodal transport planning have demonstrated that the structural features of mobility and transport networks—such as connectivity, hierarchy, reliability, and responsiveness to disruptions—play decisive roles in shaping accessibility, equity, and overall system performance. Both original research articles and reviews are welcome, and research areas may include, but are not limited to, the following topics: Structural characteristics of mobility and public transport networks; Mobility network resilience, robustness, and responsiveness to disruptions; Inclusive mobility and equity-oriented accessibility assessment; Multimodal integration and sustainable public transport system design; Data-driven modelling and analysis of mobility patterns and transport performance; Governance, planning, and policy strategies for sustainable and inclusive mobility. I look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
