# Health, Economic Growth and Policy Implications

### Message from the Guest Editor

Health and economics are inextricably linked; the Preston curve has shown the correlation between GDP and life expectancy across countries and years. This potential causal relationship is bidirectional; increases in health can lead to increases in productivity and economic growth can facilitate investment in a robust public health system. While most associations are positive, there is also a potential for negative associations as well, especially as global development tends to increase levels of pollution, the burden of which is disproportionately borne by those of lower economic and social status. Keywords

- pollution
- waste management
- sustainable development
- women's empowerment
- global health
- impact evaluation
- nutrition
- government spending

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
