

Special Issue

Application of Proximal and Remote Sensing in Sustainable Urban and Peri-Urban Governance

Message from the Guest Editors

Remote sensing, using both remote and proximal technologies, is a crucial tool for the sustainable management of urban and peri-urban areas. These technologies enable the detailed monitoring of the territory, effectively addressing environmental and urban challenges. In particular, remote sensing is essential for hydrogeological risk prevention, a growing issue in urban areas that is exacerbated by soil sealing and poor land-use planning. Remote sensing also plays a key role in managing urban heat islands, a phenomenon caused by heat accumulation in urbanized areas. Thermal sensors, both satellite-based and drone-mounted, enable the temperature monitoring and identification of critical areas, leading to interventions like urban parks, green roofs, and ecological corridors, which reduce local temperatures, improve the microclimate, and promote biodiversity. Overall, integrating remote sensing into urban management enables efficient, data-driven solutions, improving resilience to climate change, enhancing quality of life, and supporting sustainable planning for the future.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
