

## Special Issue

# Digital Solutions for Sustainable Economic Development

### Message from the Guest Editors

Digitalization is transforming traditional financial and economic systems, with the digital economy becoming a key enabler of environmental and social sustainability. Beyond mere technological advancement, digital solutions are increasingly integral to addressing global challenges—such as reducing carbon emissions, improving resource efficiency, promoting sustainable consumption, and fostering inclusive economic and social development. As digital transformation progresses across sectors and countries, it is critical to examine its broader sustainability implications. This Special Issue invites research on a range of vital areas, including the following topics:

- Emerging trends in the digital economy;
- The intersection of digital transformation with environmental and social systems;
- Sustainable entrepreneurship through digital platforms;
- Digital tools for risk modeling and management;
- Sustainable risk management in digital ecosystems.

Theoretical and empirical articles, large-scale quantitative research based on big data, business reviews, and case studies are all welcome.

## About the Journal

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
