

Special Issue

Achieving Disaster Resilient Communities

Message from the Guest Editor

What processes and mechanisms that contribute to enhancing the ability of communities to respond to disaster? What structural conditions that enable and disable communities to mitigate the impact of disaster? How do social, economic, political, and cultural factors shape resilient capacity of communities in coping with crisis and disturbance? As the world is facing the growing trends of disaster, be it physical or biological, the question of resilience becomes increasingly important to address. In this special issue, we look into resilience at the level of communities that function as the ground for social coordination, collaboration, and mobilization in response to disruption and shock. To extend the existing literature in disaster resilience, two premises underlie our framing of resilience at the community level. First is the role of social cohesion in enhancing resilient communities. Second is the impact of risk knowledge on disaster preparedness of communities. These two factors are inextricably intertwined in the social production of resilient communities.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
