Climate Change, Environmental Behavior, and Sustainable Development in Social and Cultural Psychology

Message from the Guest Editor

Psychological studies have indicated that, as humans, working together within our societal and organizational structures is essential to attaining a more sustainable environment. Therefore, it is crucial to apply the psychological process in sustainable development.

This collection is primarily focused on (but not limited to) the following areas. 1. Reviewing previous research on the adoption of climate change practices in the fields of sustainability and psychology. 2. Analyzing the impact of social and cultural factors on individual actions related to the environment and climate change. 3. Exploring the perspectives and experiences of non-WEIRD cultures and underrepresented populations to better understand the cultural influences on the environment, sustainability, and climate change. 4. Identifying policy recommendations and messaging that reflect cultural systems, thereby increasing the possibility of creating a united front in the fight against climate change.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA
