

Special Issue

Sustainable Urban Transport: Energy Saving and Pollutant Emission Control

Message from the Guest Editors

Heavy vehicles consume much more energy and produce more emissions than small cars. Urban municipal vehicles are also diesel vehicles. Like heavy diesel trucks, they consume a large amount of energy and produce heavy emissions. There are many municipal service vehicles in cities, and their everyday presence in urban areas greatly impacts the air quality. The construction of transportation infrastructure requires lots of construction machinery, consumes lots of energy, and generates lots of pollutant and carbon emissions. The purpose of promoting green construction sites is to reduce energy consumption and emissions in construction. Pure electric buses are gradually replacing diesel buses, but they consume a lot of electric energy; thus, energy conservation has become one of the main issues in the operation and management of electric buses. The integration of pollution and carbon reduction with transportation energy is currently a hot topic in China. This Special Issue hopes to highlight achievements in this field to reflect the current trend of sustainable development in transportation.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon
