

Special Issue

Risk Analysis and Decision Making for Sustainable Development

Message from the Guest Editors

In today's context of net-zero CO2 emissions and reusable resources, sustainability is an important concern for academia, government and industry. However, there is uncertainty around global political and economic development, and society is facing unconventional emergencies such as the COVID-19 pandemic, which has affected the sustainable development of energy systems, power systems, economic systems, financial systems and service systems. Identifying, measuring and mitigating risks in the sustainable development of these systems, making scientific decisions related to sustainable development and making our socioeconomic or enterprise systems more resilient are important aspects of sustainable development and its management. This Special Issue, "Risk Analysis and Decision Making for Sustainable Development", aims to identify, measure, evaluate and mitigate (transfer) sustainable development risks; analyse scientific decisions; and help to improve energy, power, economy, finance or service system resilience. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
