

Special Issue

Fisheries, Resource and Marine Ecosystem

Message from the Guest Editors

Maintaining a sustainable fishery and marine ecosystem by preventing potential infectious diseases in aquaculture or avoiding overfishing/overexploitation with illegal or destructive fishing practices has been a critical issue for marine ecosystems. The aim of this Special Issue is to gather multidisciplinary knowledge in investigations of any environmental factors undermining the balances of marine ecosystems or contributing to mortalities or decrements of the reproductive rate of fish. We invite original research articles, reviews, and communications with experimental investigations, empirical observations, evidence obtained through data mining, or pragmatic strategies derived from computational modeling. We aim to explore any environmental or anthropogenic factors influencing the long-term health of aquaculture or marine ecosystems. We especially encourage the submission of papers focusing on improvements in disease containment, resource protection, and sustaining resilience in aquaculture and marine ecosystems. Other relevant topics are also welcome which contribute to the theme of the Special Issue.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
