# The Application of Remote Sensing in Sustainable Air Quality Monitoring

### Message from the Guest Editors

According to the World Health Organization (WHO), air pollution has become a global environmental burden. In order to prevent further worsening of air pollution, protect public health, and reduce economic losses, many countries have taken significant measures to improve their air quality. Ground-based monitoring sites have been monitored around the world, but the spatial coverage is lacking and inhomogeneous. To overcome this issue, space-borne remote sensing has been widely used to obtain spatially continuous air quality information. However, many of these studies focus on data fusion or reconstruction rather than monitoring, which is vital for providing timely and detailed air quality information. This Special Issue is organized to develop and advance air quality monitoring at an urban, national, or global scale through remote sensing. The submissions are encouraged from interdisciplinary fields (environment science, atmospheric science, engineering, health, and other scientific areas) focused on improving the accuracy, practicability, and innovative approaches to air quality monitoring.

## **About the Journal**

### Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

#### Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

#### **Author Benefits**

### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

### **High Visibility:**

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
