

Special Issue

Advanced Intelligent Monitoring Methods in Exploitation of Deep Green Energy Resources

Message from the Guest Editors

From a global perspective, achieving peak carbon dioxide emissions and carbon neutrality has become an impending mission for the shared future of the human community. Deep green energy resources, which come from the deep earth or deep sea, include geothermal energy, shale gas, coal-bed methane (CBM), natural gas hydrate (NGH), etc. Advanced intelligent monitoring methods are urgently needed to harvest green energy and lower costs and with less environmental risk. In addition, the efficient exploitation of deep green energy resources can be facilitated by the use of carbon capture, utilization, and storage (CCUS) concepts or the implementation of underground hydrogen storage (UHS) and the intelligent monitoring of fluid (i.e., CO₂, H₂) migration becomes paramount to avoiding geological risks such as fluid leakage and fault activation.

This Special Issue aims to collect high-quality review and original research articles focusing on the advanced intelligent monitoring technology applied to the exploitation of deep green energy resources from deep earth or deep sea.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Marc A. Rosen

Faculty of Engineering and Applied Science, University of Ontario
Institute of Technology, Oshawa, ON L1G 0C5, Canada

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
