

Special Issue

Agricultural Landscape Stability and Sustainable Land Management

Message from the Guest Editor

The agricultural landscape is a typical landscape characterized by the interaction between human beings and nature; it possesses multifunctional value, with services such as food production, environmental regulation, and culture. Due to the rapid global industrialization and urbanization process, the vast agricultural landscape has undergone substantial changes, although the multifunctional value of the agricultural landscape cannot be replaced by other landscapes (e.g., urban, forest, and wetland). Therefore, this Special Issue focuses on the theme of agricultural landscape stability and sustainable land management, covering topics related to environmental, social, and economic dimensions, and requires a multidisciplinary approach to study agricultural landscape changes with a scientific question closely related to landscape sustainability and sustainable agricultural land management strategy. **Keywords:**

Multifunctional agriculture

Ecosystem services

Rural–urban interactions

Agricultural sustainability

Cultivated landscape dynamic

Landscape dynamic modeling

Ecological compensation

Agricultural cultural heritage

Rural spatial planning

Rural ecological restoration

Landscape stability

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in *Sustainability*, an international Open Access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. *Sustainability* publishes original research articles, review articles and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief
