# Developing Agricultural Produce as Part of Local Sustainable Management: New Challenges and Opportunities

### Message from the Guest Editors

Fresh farm produce, its supply, and its relative value chains have become increasingly important over the years and, in fact, now represent a competitive advantage for local development. However, their well-being is currently under threat from various factors, including, for example, globalisation and climate change. Current critical issues have fuelled the debate between universities, government bodies, and those working in the sector about the need to identify new tools and business models that can help farms achieve the triple bottom line, i.e., reaching environmental, social, and economic sustainability goals. Effective management of the food supply chain is of essential importance for the survival of mankind and our relationship with the natural world. Sustainability and its different forms have become a key factor in maintaining the planet's natural balance. For further reading, please visit the [Special Issue Website](#).

# About the Journal

## Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
