

Special Issue

Sustainable Management of Agro-Biodiversity for Agricultural Production and Climate Mitigation

Message from the Guest Editors

Present agricultural lands have reached a stage where most soils are infertile (i.e., they produce nothing in the absence of inputs). Ever-growing population and food demand place a huge burden on soils to produce more food. Biodiversity is a regulator of agroecosystem functions that largely satisfies the diverse needs of farmers and society. Thus, reducing biodiversity loss and improving the essential ecosystem services provided by biodiversity are key to sustainable agricultural production. This can be achieved through feasible and impactful farming practices which follow ecosystem-based approaches or natural-based solutions. This Special Issue welcomes contributions from researchers around the world working on sustainable crop production in consideration of environmental (soil, water, and air) issues, including soil restoration, climate mitigation techniques, use of climate-resistant crop varieties, pest management, healthy crop production through balanced nutrient management, high-carbon biomass crops, management of soil nutrients and their interactions with crops and environment, and the techniques involved in pollution control.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University,
Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1
(Geography, Planning and Development)
