Special Issue

Agroforestry for Sustainable Soil Management

Message from the Guest Editors

The establishment of plant production systems that are more sustainable than conventional agricultural systems is the vision of future agriculture. Agroforestry systems, which combine trees with crops or livestock, have numerous environmental benefits over conventional agricultural systems while maintaining agricultural productivity. The environmental benefits of agroforestry systems include reduced wind speed and soil erosion, conservation of biodiversity, reduced nutrient leaching, and increased soil fertility, all which could, in turn, increase plant productivity. Agroforestry is a promising alternative to conventional agriculture; however, since a large number of different systems fall under the umbrella of agroforestry (e.g., alley cropping, shelterbelts, cacao agroforestry) and the spatial extend of agroforestry is still limited in some regions, several types of agroforestry systems as well as their contributions to soil health are still understudied. Therefore, this Special Issue invites scholars to submit their work (original research and review articles) on the impacts of agroforestry on the soil ecosystem.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
