Special Issue

Sustainable Management of Animal Genetic Resources

Message from the Guest Editors

The multiple livestock breeds and species raised for food agriculture make an essential contribution to food security and poverty reduction worldwide. Diverse animal genetic resources provide adaptability and resilience in the face of climate change, emerging diseases, pressures on feed and water supplies, and shifting market demands. However, these very same circumstances are among the drivers of a rapid ongoing erosion of animal genetic diversity. In order to meet this challenge, the Global Plan of Action for Animal Genetic Resources was adopted in 2007, considering measures in the following four strategic priority areas: (i) characterization, inventory, and monitoring of trends and associated risks; (ii) sustainable use and development; (iii) conservation; and (iv) policies, institutions, and capacity-building. This Special Issue aims to explore a wide range of topics relevant to these four strategic priority areas, in both developed and developing countries, especially considering innovative approaches to better characterize, conserve, and use locally adapted breeds in their agroecosystems in a sustainable manner.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.

Editor-in-Chief

Prof. Dr. Steve W. Lyon

School of Environment and Natural Resources, Ohio State University, Columbus, OH 43210, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE and SSCI (Web of Science), GEOBASE, GeoRef, Inspec, RePEc, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Environmental Studies) / CiteScore - Q1 (Geography, Planning and Development)
