Special Issue

Application of Field Monitoring, IT, and Technology to Solve Environmental Sustainability Problems

Message from the Guest Editor

The concept of sustainable development is regarded as the one of the most successful approaches to support strong economic and social development. Development and maintenance of a sustainable environment is one of the major challenges that mankind is facing today. One should always consider a Sustainable development stands for meeting the needs of present generations without jeopardizing the ability of future generations to meet their own needs—in other words, a better quality of life for everyone, now and for generations to come. It offers a vision of progress that integrates immediate and longer-term objectives, local and global action. It also regards social, economic and environmental issues as inseparable and interdependent components of human progress. This issue is aimed at providing the readers a comprehensive summary of the advanced sustainability case studies based on the current needs of the corporations and governments using field work, IT, and technology.

About the Journal

Message from the Editor-in-Chief

I encourage you to contribute a research or comprehensive review article for consideration for publication in Sustainability, an international open access journal which provides an advanced forum for research findings in areas related to sustainability and sustainable development. The journal publishes original research articles, reviews, conference proceedings (peer reviewed full articles) and communications. I am confident you will find the journal contributes to enhancing understanding of sustainability and fostering initiatives and applications of sustainability-based measures and activities.
